

WHAT IS SALOSCAR

We developed a desktop application meant to be used for Car Dealerships, to easily connect to and see information on an external database that you can modify on the fly, including Users, Employees, Cars etc.

THE TEAM

Oscar acted as the product owner, the manager that organized the whole project, while still working on it directly.

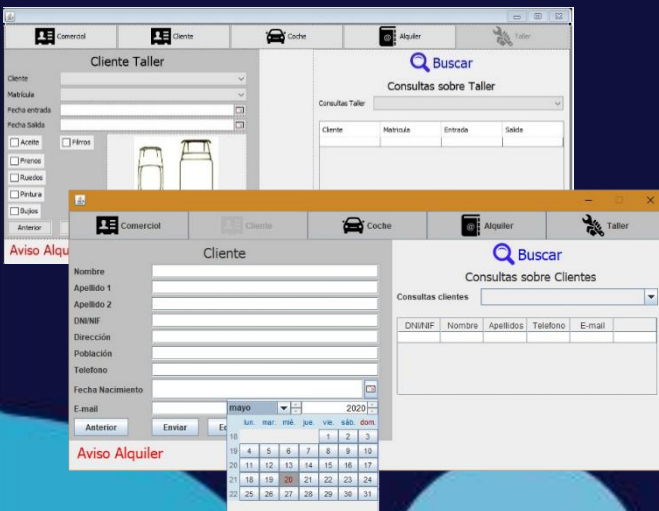

Camilo and Salva worked as developers, taking care of the more visible parts of the project

INTEGRATED PROJECT

By Oscar, Camilo and Salva

CONTACT

Camilo: camajor@xuqueralumnat.es
Salva: sajuso@xuqueralumnat.es
Oscar: osmato02@xuqueralumnat.es

TASK

1. Creating the interface and the code.
2. Creating the Database and connecting it to the app.
3. Creating a website for the app.
4. Create documentation about the safety of the environment.
5. Creating a way to get information about the app and our process out there.

RESULT

1. First, we had to build the interface and make it work with the app.
2. Then we had to make the database so we could show its information on the app itself.
3. We also were asked to make a website about the app, giving information about it and ourselves.
4. We too made extensive documentation talking about work hazards, be it physical or psychological hazards.
5. When everything else was done we made a PowerPoint and this tryptic, explaining everything we had done and how the app worked.

CONCLUSION

1. The interface was complete but still were careful to make sure we could expand it over time.
2. We finished the Database but still were careful to make sure we could expand it over time with new information.
3. We finished the website but still were careful to make sure we could add more to it in case some information would change over time.
4. After adding the last finishing touches the documentation was complete.
5. We finished the interface and decided it didn't need any more reiterations
